SENIOR SOFTWARE ENGINEER / FULL STACK ENGINEER / BACK END ENGINEER / FRONT END ENGINEER / DATA ENGINEER / DATA ANALYST / DATA SCIENTIST

Experienced Software Engineering professional with 6 years of expertise on software solutioning. Highly motivated and self-driven while continuously adapting to new technologies and industry trends. Dedicated to delivering high-quality results and thrive in collaborative AGILE team environments.

CORE STRENGTHS

Software Development, Solutioning and Software Architecture, Standardized and quality Code, Software Testing, Debugging, Project Management with best AGILE practices, Stakeholder and Client Interaction, Team coordination and team work, Engineering Best Practices, Innovative and Analytical thinking needle mover, Learning Champion, Properly Organized work style

WORK EXPERIENCE

June 2021 - Present

Software Engineer - Wiley Global Technologies

mthree Academy - <https://academy.mthree.com>

- Mainly focused on Moodle development, AWS, GitHub Classroom, technical expertise solutioning in an Agile environment.
- Transition Management, Technical ownership of the project with new process
- Engineering Best Practices - Reduce AWS cost, Coding Standards, Agile Practices, Unit tests
- Lower environment deployments
- A Technological expert in user support and maintenance with outstanding Communication skills to clarify the requirements and give technical advices.
- SSO and Salesforce Integration with other team collaborations.

The Learning Platform

- GitHub Classroom Integration. Used automated code analysis, unit test results and grade. For different languages. LMS Integration with Web Services.

Video Rendition Platform for Moodle using CloudFront and S3

- Developed a Video Rendition Platform for Moodle using AWS S3 and CloudFront, ensuring secure and optimized media delivery.
- Successful Brightcove video migration using syndication APIs and Python.

REX, SSPR, Author Services Data Engineering Pipelines

- Worked in multiple Data Engineering pipelines with AWS Glue, Snowflake, Python, SQL, ELT and ETL

Associate Software Developer - Zligger.com

Jan 2020 - Nov 2020

UStore - <https://www.ustore.lk/>

- Designing and implementation of an E-Commerce Website using Shopify E-Commerce Platform. Technologies used: Shopify, Liquid, UI/UX, Javascript, PHP Webservice, HTML5, CSS3

Green Cart

- Learned Opencart in a short period of time and implemented the requirement ensuring UI UX in E-Commerce.

Lean CRM

- A system that automates manufacturing procedures focused on Lean Manufacturing Technologies and SCM, which can identify the true demand of the customer.
- Technologies used: Laravel, Lean Manufacturing, CRM, AngularJS, Android, Retrofit, Google Assistant, Dialogflow, Viber API, Google Calendar Integration

Smart Label

- Designing and implementation of automating the manufacturing procedures of a company.
- Technologies used: PHP, Laravel, Web Service, Angular JS, UI UX

OLeap App

- A sub project of Lean CRM which manages the procedure of Customer Requirement.
- Technologies used: PHP, Laravel, Android, Retrofit, Angular JS, UI UX, Lean Manufacturing, CRM

OHome

- A Home Automation System that aims to develop a new range of switches and sockets which can be controlled by mobile app and a connected device.
- Technologies used: Android, MQTT, Arduino, IOT, Java, Electronics

Beacon Locator app

- A Beacon Locator app which can detect a Bluetooth beacon. It is an offline map location detector.
- Technologies used: Android, MQTT, Bluetooth Beacon, IOT, Java, Electronics

SKILLS SUMMARY**Software Engineering**

Software Solutioning, Problem Solving, Software Testing, Unit Testing, Object Oriented Design, AGILE, Full Stack Development, Data Science, Machine Learning, Customer Relationship Management, MVC, Database systems, Service Oriented Architecture, IoT

Languages and Frameworks

PHP, HTML, CSS, CSS3, JavaScript, TypeScript, Laravel, Codeignitor, Moodle, Java, JavaFX, Android, Python, Angular, C#.NET, BackboneJS, React Native, NodeJS, Heroku, Retrofit, Shopify, XML, JSON, YAML

Other

- Docker, Rancher, CI/CD, Jenkins, AWS, Dynatrace, Kafka, Kubernetes, Azure AD, Terraform, Cloudfront, AWS Glue
- Social Media analysis, Geo-Spatial Analysis, OpenCV, Real time image processing, Dialogflow, RAG LLM, Ollama
- GIT, GitLab, GitHub, GitHooks, PR, Code Reviews
- Linux, Windows, VMWare, VirtualBox, Kali Linux
- Tableau, PowerBi JIRA, Office365, UI-UX, Confluence, UML, Lucid Charts
- PHP Storm, IntelliJ, Android Studio, NetBeans, Eclipse
- MQTT, RabbitMQ, ViberAPI, TwitterAPI, Postman, Elasticsearch, SSO, Salesforce, LinkedIn Learning LTI, Snowflake
- Teamwork, Scrum AGILE, Team coordination, Engineering Best Practices, Coding Standards, Code Review Best Practices, Stakeholder Coordination, Release and maintenance process, Transition Management, AWS Cost reduction, Moodle Log Offloading

DBMS, and Web Servers

SQL, Postgresql, MySQL, Oracle 11g, nginx, Apache, AWS DMS Service

EDUCATION (Refer [LinkedIn Profile](#) for certifications)

Master of Science in Data Science - Reading

June 2023

UCardiff Metropolitan University UK - ICBT Sri Lanka

- Thesis on "A Predictive Model for Forecasting Coconut Farmgate Prices in Sri Lanka Using Advanced Time Series Models"

Bachelor of Engineering (Hons) in Software Engineering - Graduated

Feb 2016 - Mar 2021

University of Westminster UK - IIT SL (Second Upper Hons)

- Thesis on "A Machine Learning approach for identifying Ostealgia using Image processing".
-

RESEARCHES

A Predictive Model for Forecasting Coconut Farmgate Prices in Sri Lanka Using Advanced Time Series Models

Description: Implement an accurate forecasting model for coconut farmgate prices using advanced time series models while investigating the relationship between coconut farmgate prices and multiple external factors.

Geospatial and Data-Driven Strategies for Enhancing Solar Panel Adoption and Service Optimization in Sri Lanka

Description: Leverage geospatial analysis and data science techniques to optimize solar panel adoption, site suitability for new branches, marketing strategies, and route planning, contributing to sustainable energy growth and cost reduction in Sri Lanka.

A Machine Learning approach for identifying Ostealgia using Image processing

Description: A study of a prediction to analyze the beginning stage of Ostealgia on the patient's side by utilizing external systems of different Ostealgia diseases. And the probability of a fracture is determined by getting BMD (Bone Mineral Density) value from creating a Synthetic X-Ray of a hand image.

- Technologies and Methods Used: Python, Random Forest Classification, Machine Learning, Image Processing, Bone Mineral Densitometry Algorithms Skeletonization, Image Feature Detection

Smart Tooth Detector

Description: This project investigates a smart tooth detector which enables to detect cavities of teeth.

- Technologies and Methods Used: Python, Android, OpenCV, Real time Image and Video-processing, VPS cloud server database system, IOT, Electronics
-

OTHER PROJECTS

Predictive Social Media Dashboard for Organization

A Predictive dashboard for selected organization (Netflix). Created for MSC DS assignment.

- Technologies used: Web Scraping, Youtube API, Python, Postgresql, nginx and related python packages, JSON.

Predictive Geo-Spatial Dashboard for Selected Event

A predictive geo-spatial dashboard for selected event (Kuwani Event). Created for MSC DS CW

- Technologies used: Web Scraping, Python, nginx, docker, related python packages, JSON
-

I hereby Certify above details are correct and true.
